

Worksheet #1: Haunted House Animation

Using: `position: absolute`, `$.delay()`, `$.animate()`

- Let's create **haunted-house.html** in neocities.org

- Search for an image of a **haunted house** in google

I found the following:

http://thehauntedmansion.com/HM10/Home_files/mansion-header.jpg

- Search for an image of an *animated flying witch gif*

Mine is the following:

http://www.sylvangrovehoa.com/images/flying_20witch_20animated.gif

- Let's add the following HTML content to the page
(See: <http://jsbin.com/xemaneroha/1/edit>)

```
<style>
  .moving {
    position: absolute;
    top: 20px;
    left: 200px;
  }
</style>

<script src="http://code.jquery.com/jquery-1.11.1.js"></script>
<script>

  $('.'.witch').delay(1000).animate( { top: 0, left: 400 } );

</script>
```

```
1
2 <script src="http://code.jquery.com/jquery-1.11.1.js"></script>
3
4 <style>
5   .moving {
6     position: absolute;
7     top: 20px;
8     left: 200px;
9   }
10 </style>
11
12 
13
14 
16
17
18 <script>
19   // 1. We set the initial position to (20, 200)
20   $('<u>.witch</u>').delay(1000).animate( { top: 0, left: 400 } );
21   // 2. We wait for 1 second
22   // 3. We animate the witch to (0, 400)
23 </script>
```

- Let's try the following:

```
$('.witch').delay(1000).animate( { top: 0, left: 400 } )
      .delay(1000).animate( { top: 200, left: 100 } )
```

- Let's add more characters to the haunted house. How about a Pokemon character?

```

```

- Inside the <script> tag, add the following:

```
$('.pokemon').delay(1000).animate( { top: 30, left: 0 } )
      .delay(1000).animate( { top: 50, left: 200 } )
```
