Reviewing HTML / CSS + Classes

1) Write the HTML code necessary to display this image provided with the following url http://placehold.it/500/500

2) Now write the tag again, but give it a width and height of a hundred.

3) If I want to click on the text "Google" and have it link to the url http://google.com, what would the HTML code look like?

4) Instead of the text "Google", I want the following image (http://www.google.com/ images/errors/logo_sm_2_hr.png) to link to google. What would that HTML code look like?

5) Write CSS for the following...
   1) All **h3** tags must have a background color of orange.
   2) The body must have a background image of http://subtlepatterns.com/patterns/congruent_pentagon.png
   3) Every image should have a red border with a width of 25px

`<style>`

`</style>`

6) Write CSS code to create borders for an image tag two different ways. How would you create a dashed border?

7) Which of the following styles are classes? Which are tags? How did you know they were class styles?

```
<style>
   body {
     background-color: yellow;
   }

   h3.small-red-header {
     font-size: 10px;
     color: red;
   }

   img {
     border: thin solid black;
     box-shadow: 10px 5px 5px orange;
   }

   .blue {
     color: pink;
   }
</style>
```

8) Help us fix the styles so our code generates the following.
   JSFiddle: http://jsfiddle.net/x9ewvp1w/

```html
<html>
  <head>
    <style>
        .square {
          display: block
          width: 100px;
          height: 100px;

        red {
          color: #FF0000;
        }

        .border {

        }
    </style>
  </head>

  <body>

    <div class='square red'></div>
    <div class='rectangle green'></div>
    <div class='square red border'></div>

  </body>

</html>
```

9) What would we do if we wanted to give each shape a border?
